

WishmaX

Problem Statement

Shopify by default doesn't have Wishlist functionality by default

Why is Wishlist Required?

Reason	Description
Save & Buy Later	Customers can save products and purchase later
Improve Retention	Customers have a reason to return to the website
Capture Purchase Intent	Merchants can understand which products customers like
Recover Out-of-Stock Intent	Customers can save unavailable products instead of abandoning them
Share Products	Customers can share their Wishlist with friends or family
Support Marketing Automation	Wishlist activity can be used for reminders, back-in-stock alerts, and customer segmentation

User Persona

Persona	Goal
Customer	• Add products to Wishlist while browsing on website • Share Wishlist products to others • Same Wishlist across devices
Admin	• Wants to enable and configure Wishlist and UI placement • Wants Wishlist data for campaigns and Shopify Flow
Developer	• Test on different theme before the Live Theme • Headless Integration

Solution

Create a Wishlist app for Shopify solving for the goal of the users.

▼ Admin Side Flow

1. Install App

2. Grant Permission

a. <https://loom.com/i/f54a005d902944519790d588277ef11c> Embedding

i. [To add the list of permission required for this app]

b. Terms & Condition & Privacy Policy

3. Embed in Website

The UI of the App will be divided in the 5 sections (Clicking on App - Opens a URL that opens the KartmaX common Dashboard)

1. Configure

2. Analytics

3. API Details

4. Subscription

5. FAQs/Contact Us

▼ Configure

Section	Purpose
Display Settings	Configure heart icon or button style Select where Wishlist appears
Wishlist Page Settings	Configure Wishlist page content and actions
Share Wishlist Settings	Enable/disable Wishlist sharing
Guest Wishlist Settings	Configure local storage behaviour
Cart Behaviour Settings	Configure add-to-cart behaviour
Shopify Flow Settings	Enable Wishlist events for automation
Headless API Settings	Generate and manage API keys
Advanced Settings	Theme selector, custom CSS, fallback settings

Section & Details

▼ Display Settings

Option 1: Heart Icon

Setting	Description
Unselected Heart Colour	Colour before the product is added to wishlist
Selected Heart Colour	Colour after the product is added to wishlist
Icon Size	Small, medium, large, or slider-based size control
Icon Style	Outline heart / filled heart
Hover Colour	Optional hover colour
Mobile Icon Size	Separate size control for mobile
Icon Background	Optional background circle/square
Icon Border Radius	Optional roundness control
Font	Predefined list of Google Font

Option 2: Button with Text

Setting	Description
Button Text	Default text: Add to Wishlist
Button Background	Button fill colour
Button Outline	Button border colour
Text Colour	Button label colour
Selected State Text	Example: Saved / Added to Wishlist
Selected State Colour	Colour after product is added
Border Radius	Slider to control roundness
Button Size	Slider or small/medium/large options
Font Weight	Regular / Medium / Bold
Full Width Button	Enable/disable full-width button on PDP

Note: Not applicable for Collection Page and Cart

Button States:

State	Requirement
Default	Product is not added to wishlist
Hover	Visual feedback on hover
Selected	Product is already in wishlist
Loading	Shows while wishlist action is processing
Disabled	Used when product/variant is unavailable
Error	Shows if wishlist action fails

▼ Placement Settings

Placement	Description
Product Detail Page	• Show wishlist button below Add to Cart / Buy Now • Over the Product Image
Product Listing Page	• Show heart icon over product image ◦ Position decision 'A bar with move icon to horizontally & Vertically' • For Recommended products & Need to see how 3rd party Search & filter might affect this (+ For Search Result Page)
Cart Page	If there is 3rd part Cart then not possible
Header	• Wishlist icon with count • Colour of Icon

▼ Wishlist Page

The header gets added with a 'Wishlist Icon' which redirects to the wishlist page.

Section	Description
URL	Default path: /wishlist
Page Heading	Default: My Wishlist
Product Cards	Saved products

Section	Description
Select Checkbox	Select products to move to cart Default: All Selected
Add Selected to Shopping Bag	Adds selected products to cart
Share Wishlist	Generates Wishlist share link
Empty State	Message when Wishlist is empty

▼ Add to Wishlist

Enable/Disable for Guest User

▼ Share Wishlist

Allow Customer to share wishlist [Yes/No]

Option	Description
Copy Link	Copies wishlist URL

The shared wishlist page should show

- Wishlist products
- Product image
- Product title
- Product price
- Stock availability
- View Product CTA
- Add to Cart CTA

▼ Analytics

Metric	Formula	Why It Is Important	Possible Insights
Total Wishlist Adds	Count of all <code>wishlist_added</code> events in selected date range	Shows overall wishlist usage and customer interest	Low adds may mean wishlist icon placement is weak. High adds show strong product interest.

Metric	Formula	Why It Is Important	Possible Insights
Guest Wishlist Users	Count of unique guest IDs who added at least one product to wishlist	Shows wishlist usage from non-logged-in users	High guest usage means wishlist should work well without forcing login.
Logged-in Wishlist Users	Count of unique customer IDs who performed at least one wishlist action	Shows usage by identifiable customers	Useful for retention campaigns, personalization, and Shopify Flow automation.
Wishlist to Cart Conversion	$\frac{\text{Wishlist items added to cart}}{\text{Wishlist items added}} \times 100$	Shows how effectively wishlist moves users from interest to cart	Low rate may mean users need reminders, offers, or stronger wishlist page CTAs.
Wishlist to Order Conversion	$\frac{\text{Wishlisted items purchased}}{\text{Wishlist items added}} \times 100$	Shows actual business impact of wishlist	High wishlist adds but low order conversion may indicate pricing, inventory, or product content issues.
Most Wishlisted Products	Count of wishlist adds grouped by product ID	Shows which products have the highest customer interest	High wishlist but low sales may indicate price hesitation or missing sizes.
Out-of-Stock Wishlist Items	Count of wishlist items where current availability = out of stock	Shows hidden demand for unavailable products	Helps merchandising teams decide what to restock.
Shared Wishlists	Count of <code>wishlist_shared</code> events or unique share links generated	Shows whether customers are using wishlist socially	Useful for gifting, festive shopping, home decor, and fashion use cases.
Shared Wishlist Visits	Count of visits to shared wishlist URLs	Shows whether shared links are actually being opened	High visits mean wishlist sharing is creating new discovery traffic.

Metric	Formula	Why It Is Important	Possible Insights
Wishlist Add-to-Remove Ratio	$\frac{\text{Wishlist Added Events}}{\text{Wishlist Removed Events}}$	Shows whether users are retaining saved products	Low ratio may mean customers are losing interest or removing items due to price/stock changes.
Average Wishlist Items per User	$\frac{\text{Total active wishlist items}}{\text{Unique wishlist users}}$	Shows depth of wishlist usage per user	High value means customers are comparing or shortlisting multiple products.
Wishlist Page Views	Count of wishlist page visits	Shows whether users are returning to view saved products	High adds but low page views means customers save products but do not return.
Wishlist Page to Cart Conversion	$\left(\frac{\text{Users who added item to cart from wishlist page}}{\text{Users who viewed wishlist page}} \right) \times 100$	Measures how effective the wishlist page is at driving cart action	Low rate may mean product cards, price visibility, or CTAs need improvement.
Guest to Logged-in Wishlist Conversion	$\left(\frac{\text{Guest wishlist users who logged in}}{\text{Total guest wishlist users}} \right) \times 100$	Shows whether wishlist encourages account creation	Low rate may mean login prompts are weak or shown at the wrong time.
Revenue from Wishlisted Products	Sum of order revenue from products previously added to wishlist within attribution window	Connects wishlist usage directly to revenue	Helps prove whether wishlist is a revenue-driving feature.
Wishlist Source Breakdown	Count of wishlist adds grouped by source page: PDP, PLP, Collection, Search, Cart, Shared Wishlist	Shows where users are adding products to wishlist from	Low PLP adds may mean the heart icon is not visible enough on listing pages.

Metric	Formula	Why It Is Important	Possible Insights
Out-of-Stock Moved to Wishlist	Count of cart items moved to wishlist because they were unavailable	Shows cart abandonment recovered into future purchase intent	High count means inventory issues are affecting cart/checkout conversion.
Wishlist Product Availability Rate	$\frac{(\text{Active wishlist items currently in stock} \div \text{Total active wishlist items}) \times 100}{100}$	Shows how many wishlisted products are currently purchasable	Low rate means demand exists but customers cannot buy due to stock issues.

▼ API Details

Authentication

Access Type	Description
Public Storefront Key	Used for frontend wishlist actions
Customer Token	Used for logged-in customer wishlist
Guest ID	Used for guest wishlist
API Secret	Used for secure backend/server calls
Allowed Domains	Restricts API usage to approved domains

API Endpoints

Endpoint	Method	Purpose
/api/wishlist/add	POST	Add product to Wishlist
/api/wishlist/remove	POST	Remove product from Wishlist
/api/wishlist	GET	Get Wishlist items
/api/wishlist/merge	POST	Merge guest Wishlist with customer Wishlist
/api/wishlist/share	POST	Create shareable Wishlist link
/api/wishlist/share/{token}	GET	Get shared Wishlist

▼ End User Behaviour on Add to Wishlist

- Logged in User

Requirement	Description
Account Mapping	Wishlist is saved against customer account
Cross-device Access	Wishlist is available across devices
Variant Support	Variant-level Wishlist should be supported
Persistent Wishlist	Wishlist remains until user removes items
Duplicate Prevention	Same variant should not be added twice

- Guest User

Requirement	Description
Local Storage	Wishlist is saved in browser local storage
No Login Required	Guest can add/remove/view wishlist items
Browser-specific	Wishlist exists only on same browser/device
Login Merge	Guest wishlist should merge with customer wishlist after login
Local Data Limitation	Wishlist may be lost if browser data is cleared

- Data to Store

Field	Description
Product ID	Shopify product ID
Variant ID	Shopify variant ID
Product Title	Product name
Variant Title	Size/color selected
Product Image	Product or variant image
Product Handle	Product URL handle
Price	Current product price
Compare-at Price	Optional
Availability	In stock / out of stock
Added Date	Date when product was added

Field	Description
Source Page	PDP / PLP / Cart / Shared Wishlist

- Variant Handling Rules

Scenario	Expected Behavior
PDP with selected variant	Save selected variant
PDP without selected variant	Ask user to select variant
PLP without variant selector	Save product-level item or first available variant
Product has one variant	Save default variant
Variant deleted later	Show unavailable state
Same product, different variant	Treat as separate wishlist item

Note: Clicking again on Wishlist icon should remove product from wishlist

Action	Result
Click selected heart again	Product removed from wishlist
Click remove on wishlist page	Product removed from wishlist
Remove guest item	Item removed from local storage
Remove logged-in item	Item removed from backend
Remove shared item	Only wishlist owner can remove

- Move to Cart

Scenario	Expected Behavior
Product is in stock	Add item to cart
Product is out of stock	Disable add-to-cart
Variant unavailable	Show unavailable message
Product already in cart	Increase quantity by 1
Cart API fails	Show error message
Next Step	Redirect to Cart once moved to Cart
